

I'm not robot!

While this HTML is in your regular document, Editor will remove it and use that element in its own form. This is done by using the template option. Consider for example the case where we want to group similar fields together - this is a perfect use for the fieldset element: Name ... fields Office ... fields HR info ... fields Inserting fields We need to tell Editor where to insert the fields into the template. Can be done using one of: Custom elements Data attributes (requires 1.6.2+) Custom elements Editor can search for HTML5 custom elements called editor-field. This element must have a name attribute that defines the field that should be shown there (matching the fields.name option defined for the field when created). Expanding the above example we might have: Name Office HR info The field that Editor inserts will contain the full DOM structure for that field. Meaning that labels, messages, error messages, etc will all be shown inside the template without any additional configuration. Data attributes As of Editor 1.6.2 Editor can also determine where a field should be inserted into a template through the use of the data-editor-template attribute. Unlike the editor-field element the field will be inserted into the element that has this attribute, so a div is typically used for this. Using attributes can be useful if you want to be able to validate HTML strictly, without requiring any configuration for custom tags. Reusing the above example, but this time with data-editor-template attributes we have: Name Office HR info Any HTML! The important point to make with templates is that you are not restricted to any particular layout for your field. You could readily use Bootstrap's tabs if you wanted a tab layout, an accordion or any other layout you wish to use. If your layout HTML requires Javascript events, make sure you add those events before initialising Editor, as Editor will remove the template element from the DOM until it is required. CSS customisation Alongside your custom HTML, you will very likely wish to define your own CSS to style the form. Flex box is a popular way for laying out complex elements, quickly and easily, but really it's up to you how you style the form! Lighthouse customisation When laying out complex forms, you might want to have a little more width for the form to take up in the display. The width of Editor's built in lighthouse control (lightbox) can be customised using the following CSS (modified to suit your needs of course): div.DTED_Lightbox_Wrapper { width: 800px; margin-left: -400px; } The full DOM structure for the lightbox is defined in the styling manual if you wish to customise it further. Inline and bubble editing At this time only the primary form display supports layout templates. Inline and bubble editing (named and bubbled) do not support template layouts as they are designed specifically to be used with only a single field in the case of inline editing and a small number of fields for bubble editing. Example A live example of Editor's template layout feature is available on this site, and is included in the PHP and .NET download packages if you would like to run it locally and experiment with the pre-defined code. Tables are one of the most common elements used in almost all websites. But it is also one of the most commonly overlooked elements while developing a website. Until a necessity comes we won't remember that we need to add a table. We on this list have collected some of the best CSS table templates that you can customize easily and use in your existing website or ongoing projects. CSS table is a broad category, the tables are used for different purposes. The main purpose of it is to show a list of data. If you are making a table template for a stats-rich website, make sure you have horizontal and vertical highlighting options. In this CSS table templates list, we have also included templates that have highlighting and scrolling options. Another form of table template which is widely used is pricing tables. In this list, we have also included templates for pricing tables. All these CSS table templates use the latest CSS3 version so you get more natural colors and responsive animation effects. Here are the simple and stylish CSS table templates you can use on your website and application. Stylish CSS Table V04 As the name implies, this one is a stylish CSS table design for weekly schedules. If you are looking for a clean CSS table to show your weekly schedule like yoga classes, online courses, or any other similar thing, this calendar-style CSS table will be a good choice. The creator has used images and bold texts to clearly show the entries for the particular day of the week. You have navigation arrows at the bottom of the table to jump to the next & previous months. Info / Download Demo HTML & CSS Table Style V06 In the V06 CSS table template, you get a clean and interactive table design for an eCommerce cart. This table's borderless design gives a tidier look; the user can also quickly see the entries without any issues. Checkboxes and text boxes are also given in this template to make the interactions easier. Basic functionalities are taken care of by the developer; therefore, you can concentrate on the custom features and optimizations to make this table fit your needs. Info / Download Demo CSS Table V09 The V09 CSS table template will be a perfect fit for admin-related works. Admins can quickly organize the entries because of this template's clean layout and colorful buttons. The creator has given us a concept model, so the buttons don't have any functionalities in the default design. But, the simple code structure gives you enough room to add your custom elements and features without much effort. Info / Download Demo CSS Table V10 The V10 is also similar to the V09 template mentioned above. This template uses different colors for each row to make it easier for the users to read the information. None of the elements are clickable in the default design. You can add sort functions and options to edit the entries to make the table even more friendlier for the audience/table users. The V10 is a mobile responsive CSS table, which might be an advantage for developers making apps compatible on both small and big screen devices. Info / Download Demo Fixed Column Table It is not always possible to show all the data and stats in a single table. We have to provide scrolling options to help users see the complete record. This CSS table template gives you that option out of the box. As the name implies it has a fixed main column and all other related fields can be scrolled horizontally. The developer has given you ample space in the column to add even longer contents without any trouble. Since this template uses HTML5 and CSS3 frameworks, you get more natural colors and a mobile responsive table. If you need to add more rows, you can add them easily, this table template can handle it. Info / Download Demo Fixed Header Table Fixed Header Table is a package of five CSS table templates. With this package, you get different color options and style options, making this table package unique. All five variants have a fixed header and obviously, you get a vertical scrolling option. Another fun part of this table package is you get a dark-themed table to satisfy black color enthusiasts. All the templates don't have a column border, so you get plenty of space to add longer contents. At the same time, the column adjusts themselves so you won't have a clumsy look with this table template. Info / Download Demo Table With Vertical & Horizontal Highlight When there is a data cluster, it is always difficult to pinpoint a value. If you are a data analyst who spends most of your time in excel sheets, you will know the difficulty of finding a value, you have to recheck the rows and columns quite often. The developer of this table template gives us a solution for this issue using the interface design. This template highlights the column and the row you are hovering, so you can easily cross-check the value you want. It is a minor thing, but when you do lots of excel work, this highlighting option will save your time. As a package, the developer gives you six table templates, all six have different designs. Since this template uses the latest HTML5 and CSS3 frameworks you get more modern-looking templates, even you get a table template with a gradient color scheme in this package. Info / Download Demo Responsive Table V1 Responsive Table V1 is a simple table template. As the name implies it is a responsive table template. So you can add any number of tables and columns, the table will adjust automatically. To differentiate each row, a white and grey pattern is used. This template uses HTML5 and CSS3 frameworks, editing and working with this template will be an easy job for the developers. This template does not support scrolling options. You can use the CSS table templates with scrolling options mentioned above if you need one. For the demo purpose, a gradient color background is used, based on your design need you can customize or use the table alone on your website. Info / Download Demo Responsive Table V2 Responsive Table V2, as the name implies it is another version of the responsive table template mentioned above. This template is also from the same creators of the version one template mentioned above. The version two template is a simple and clean-looking template, on the neat white background, the texts are legible and easy to read. Hover effects help you identify which field you are currently viewing. Like most other free CSS table templates mentioned above, this one also uses a borderless design for columns. Since the fields adjust smartly you needn't worry about the overlapping of texts and miss alignment. Over the version two template is a clean and easy-to-use table template that fits in well with any type of website. Info / Download Demo Pure CSS Table Highlight Pure CSS table highlighted is another vertical and horizontal highlight table template. But with this template, you get only one template. The code used to create this awesome-looking table is shared with you directly by the creator. Since the developer usedCodePen interface you can see a live preview while editing the template. For the demo purpose, the developer just created a 5x5 table, but you can add as many rows and columns as possible. To differentiate the heading section from the rest of the cells, a dark highlighter is used, based on the color scheme you can easily customize the skin of this table template. Unfortunately, this template is not a scrollable table template if you need one you need to make it scrollable manually. If you just need a static table template, you can use this table template without any changes. Info / Download Demo Bootstrap Table Template Bootstrap DataTable template has a colorful and functional table design. The use of light and dark colors alternatively makes the interaction easier for the user. All basic elements are there in this template, and all of them are placed at appropriate places; hence, users can easily navigate throughout the table. The entire code script is shared with you on the JSFiddle editor; you can edit and visualize the results on the code editor itself. Info / Download Demo Add Rows to Table If you want a table with an option to add and delete rows easily, this CSS table template might come in handy. With just a click of a button, you can quickly add a row and delete it. The creator has kept the row adding and deleting action as simple as possible, so the uses will find the table easy to operate. The only thing you have to keep in mind in this template is the default two rows can't be deleted; you can change this by adjusting the code a bit. Info / Download Demo Responsive Table CSS As the name implies, responsiveness is the key highlight of this CSS table template's code script. Design-wise, the creator has kept the design very simple and neat. The use of shadow effects to highlight the rows is a thoughtful touch. Users can easily read and interact with the table entries. Since it is a responsive table CSS design, accessing the table on the small screen devices will be an easy job. This template's code script is clean and simple, just like its design, therefore, using this code script will be an easy job for the developers. Info / Download Demo Fixed Table Header Fixed Table Header, as the name implies this template is a vertical scrolling one. This table matches the trendy website design practice with the fresh gradient color scheme. Thanks to the latest CSS3 framework, the colors look more vibrant and the animations sleek. The only small hamper with this template is it doesn't support hover effect out of the box. Font selection is also done neatly on this template, the texts are light and easy to read. It might be difficult to identify on which field you were last viewing. The Fixed table header is a fully functional CSS table template from the front end. By keeping this template as a base you can create your own custom tables in no time. Info / Download Demo David Kern HTML5 Table Just like the design, the code structure of this table design is also simple and clean. Not all tables have the same sections and rows. Some times we have to make subdivisions under the main section. If you have any special table design like that, CSS table templates like these will come in handy for you. Apart from the unique sectioning, this table template doesn't have any interactive elements or hover effects. Since this design is made only using the HTML5 and CSS3 script, you can easily work with this template and add the functions you want. Info / Download Demo Simple Table Concept The developer Sdnhk has given a simple table design in this example. The clean design of this table makes it a good option for mobile application table screens. Alternate light and dark row colors clearly distinguish each row entry. Plus, it avoids table grids and makes the table look less bulky on the small screen devices. A call to action button and a dismiss button is given in the default design. Since it is a front-end concept, the creator hasn't concentrated on the functionalities. By keeping this design as a base, you can create your custom table in less time. Info / Download Demo Dynamic Background Tiles CSS table templates like this will be a good option if you are making tables to handle large data and let the user easily understand the categories. In this example, the creator has used gradient color schemes and given a key at the bottom, indicating the allotted percentage for each color. Hence, users can easily understand the category from the color cell color itself. The creator has not given any options to change the colors and enter any value. So you have to yourself to make it a truly dynamic table. Info / Download Demo Flat University Timetable As the name implies, it is a flat-style table template. The creator has used classy design effectively to make a user-friendly table. Hover effects are used smartly to give tooltips and short notifications. If you like to make the tooltip animations even more engaging, take a look at our tooltips CSS design collection. Since it is a timetable concept, different colors are used effectively to organize related content. If your requirements are less or you have a fixed schedule for all weeks in the month, tables like this will be a good choice. Info / Download Demo Responsive Table The Responsive Table has given you a neat modern-looking table. Colors and neat typographies are used effectively to present the content neatly to the user. Since this table is designed to manage user data, you have space to add the user's profile picture in a column. All elements in this template are purely made for design purposes, so you can't interact with them. You can take the front-end code and use it as a base to create your own custom table. Since it is a responsive table, your mobile-responsive design work will be easier with this template. Info / Download Demo Angular Material Table You can understand from the name itself that this is a material design-based table. The creator of this template has given useful features like sorting and search options. An ample amount of space is given between each column so you no need to worry about long texts. But it is better to add auto adjust character to the table. The developer has shared the entire code used to make this material design table. Hence, you can easily work with this design and tune it as per your needs. Apart from the sorting and search options, this table also has a pagination option to navigate between the pages easily. If you like to add your own unique touch, take a look at our free pagination design collection. Overall, the Angular Material Table is one of the best material design CSS table templates. Info / Download Demo Angular JS Filter Table This table design is also almost similar to the Angular Material table design template mentioned above. But, this one is very simple and doesn't have colorful vibrant colors of the material design. All the basics are done properly in this template so you can concentrate on other features you need in your table. In this template also you get an active search bar that shows relative contents rapidly as you type in the words. For more search bar designs, take a look at our Bootstrap search box design collection. The entire code structure used to create this design is shared with you on the CodePen editor. Hence you can customize and see your work in the editor before implementing it on your website. Info / Download Demo Slick Tables Slick Tables has a neat colorful table design, but it doesn't have useful options that you have seen in the Angular tables mentioned above. It has basic options like hover highlighter and neat segmentations. Even you have the option to dim down the data that are expired. If you are making a table that shows real-world data, CSS table templates like this will come in handy for you. For handling dynamic contents and manage data easily, we have made a separate post for the Bootstrap Data table. Look at it to find tables with useful options and even chart designs to visualize the data. Info / Download Demo Comparison Table This one is a pricing table comparison design. The long table design allows you to add all the important options so that the user can easily compare the plans before choosing one. This template lets you easily highlight and show the best plan to the user. If you like to make the special plan even more appealing to the user's eyes, take a look at our CSS Ribbon design collection. In the default design, the letters are made bigger and bolder so that the user can easily see the contents in the table. Info / Download Demo CSS Table CSS table is an intuitively designed table template. The developer had used the given space elegantly with the help of modern CSS animation effects. In some reports you have to be more elaborate about the stats you shared in the table, the rows in this table template expands automatically to help you add a small note about that particular row. To help you organize the related contents effectively color codes are used. The vertical color label at the end helps you to group the data for later reference. In the demo version, this template does not support filter options, when you add filter option this color grouping will give a nice visual appearance and it will be easy for the users to find the data set easily. Info / Download Demo Pricing Table UI As the name implies this template is actually designed for the pricing table. Instead of following a traditional grid layout, the creators of this template choose a card design approach. With trendy gradient colors and icons, this table fits well with many modern websites. Bootstrap search box design collection. The entire code structure used to create this design is shared with you on the CodePen editor. Hence you can customize and see your work in the editor before implementing it on your website. Info / Download Demo Slick Tables Slick Tables has a neat colorful table design, but it doesn't have useful options that you have seen in the Angular tables mentioned above.
